Summary

I'm passionate about Cyber Threat Hunting and Detection Engineering.

My perfect work day includes analyzing emerging threats, identifying and documenting key adversarial behaviors (ATT&CK TTPs), Hunting on large amounts of data (e.g. using tools like Kibana, Splunk, Athena), creating new detections and fine tuning existing ones to diminish unwanted hits.

I work with Mitre ATT&CK framework everyday.

I fuel Trellix EDR with detection logic against emerging threats.

I'm self-motivated and results-oriented. I can do work alone, but I prefer working as part of a team. I enjoy mentoring others and being a mentee.
